Clear Demand Company Overview

Clear Demand is the leader in Intelligent Price Management and Optimization (IPMO) for retail. We were the first company to deliver an omni-channel lifecycle pricing solution that synchronizes prices, promotions, and markdowns online and in-store to produce a consistent brand and shopping experience. Clear Demand is the leading innovator in retail pricing solutions with patented science that analyzes historical sales to understand shoppers' sensitivity to price and generate price and promotion strategies that account for pricing rules, cost changes, and competitor prices to achieve profit and revenue goals. Architected on big data and delivered through Software-as-a-Service (SaaS), Clear Demand's Intelligent IPMO solution can be administered from a public or private cloud. Clear Demand's innovations in retail science simplify adoption and use, while allowing retailers to see value in just weeks with more transparency and minimal disruption to existing business.

Clear Demand offers a competitive salary with stock options and a benefits package, including medical, dental, 401k.

Job Description – Field Engineer

The Field Engineer is responsible for solving technical problems implementing and supporting Clear Demand software in the field. This job is customer-facing and involves technical support and engagement through all phases of the customer lifecycle – from pre-sales demo preparation, through implementation and ongoing support. While this is an engineering position within the technology organization, the responsibilities and day-to-day interactions involve extensive collaboration with the Sales and Professional Services teams.

Duties:

- Configures, monitors and maintains data integration pipelines
- Assists sales and services team members in planning and executing pre-sales demonstrations and customer onboarding
- Assists in development of data pipeline enhancements and data integration tasks in support of product development initiatives
- Responds to alerts and works tickets related to data integration and infrastructure services

This position has Required Skills essential for the job and Additional Skills. Candidates must have the required skills to succeed in the job. Additional skills are a plus.

Required Skills:
- 2+ years developing and / or administering distributed systems
- Strong knowledge of Unix, preferably Ubuntu Linux
- Strong knowledge of SQL and ETL fundamentals
- Strong knowledge of core internet protocols
- Information security fundamentals
- Strong scripting skills in at least one of bash, Python, Perl (Python preferred)
- Strong communication skills
- Ability to handle multiple competing demands

Additional Skills:
- Windows system administration
- C, C# or Python software engineering experience
- Data science skills
- Database administration
- Advanced Information security
- Retail science / retail industry experience

Education:
- Bachelor's degree in computer science or an engineering field preferred.
